

This is my *first* document prepared in L<sup>A</sup>T<sub>E</sub>X. I type it on June 1, 2017.

We have seen that to typeset something in L<sup>A</sup>T<sub>E</sub>X, we type in the text to be together with some L<sup>A</sup>T<sub>E</sub>X commands. Words must be separated by spaces (does not matter how many) and lines maybe broken arbitrarily.

The end of paragraph is specified by a *blank line* in the input. In other words, whenever you want to start a new paragraph, just leave a blank line and proceed.

Carrots are good for your eyes, since they contain Vitamin A. Have you ever seen a rabbit wearing glasses?

The numbers 1, 2, 3, etc. are called natural numbers. According to Kronecker, they were made by God; all else being the works of Man.

I think L<sup>A</sup>T<sub>E</sub>X is fun.

Note the difference in right and left quotes in ‘single quotes’ and “double quotes”
